Summary

Results-driven full-stack developer with hands-on experience in Node, React, and Linux, complemented by a strong background in AI and Data Science. Proven ability to work across the full stack, from frontend development to backend deployment on cloud platforms like AWS. Eager to leverage my skills in a remote, full-time position, contributing to the development of high-quality online software.

Experience

Software Developer Intern, Build91 (Oct 2025 - Present)

- Developed AI-driven video tools using Node.js and Python, with cloud deployment on AWS EC2 instances.
- Contributed to full-stack development of AI-powered interior design solutions and website/CRM development for Buteak Hotels.
- Designed and exposed REST APIs hosted on EC2, enabling automation workflows and integration with external platforms.
- Deployed Python-based chatbots and RAG systems on AWS EC2 for scalable AI solutions.

District Development Associate, Government of India (May 2019 - July 2019)

- Demonstrated ability to work in a team environment, contributing to the Wonder On Wheels initiative.

Education

Masters in Technology, IIIT Naya Raipur (August 2024 - Present)

- Specialization: Artificial Intelligence and Data Science
- GPA: 9.0

Integrated Masters in Science (Physics), Birla Institute of Technology, Mesra (July 2017 - May 2022)

- GPA: 7.63

Skills

- **Full-Stack Development:** Node.js, React, Next.js, MongoDB, Express, Flask
- **Cloud & DevOps:** AWS EC2, Linux, Docker
- **Frontend Development:** React, Tailwind, Vercel
- **Backend Development:** Node.js, Python, MongoDB
- **Operating Systems:** Linux

Projects

IIIT-NR Educational Chatbot (Ongoing)

- Developed an API-driven AI chatbot using Retrieval-Augmented Generation (RAG) and FAISS for context-aware responses.

Visualization of Algorithms (Ongoing)

- Built a web-based platform for explaining data structures and algorithms through interactive visualizations and AI-assisted code explanations.

Next Word Prediction (Jan 2025 - Mar 2025)

- Developed an LSTM-based next-word prediction model using TensorFlow and Keras, deployed through an interactive Streamlit interface.
